Objective

I am a motivated, passionate and detail-oriented software developer with a knack for crafting intuitive and accessible user interfaces. I have experience developing, testing and debugging using a range of modern technologies and practices. I love getting into the details, writing clean, maintainable code and making sure everything works smoothly.

I am a critical thinker with excellent time management, problem solving, and a strong sense of self-motivation. Whether I'm collaborating with a team or working independently, I take pride in delivering quality solutions and continuously learning along the way.

Professional Experience

Blackdot digital

Full Stack Web Developer

Part-time freelance work
September 2023 – Currently

Blackdot digital is a company my partner and I have opened to complete web projects together. My role included planning the stack, designing UI, interacting with the client, setting and distributing tasks, reviewing code and working with servers.

- **Precious Lists**

<https://preciouslists.com/>

Joined an ongoing web development project to implement bug fixes and integrate new features. Later was contracted to redesigned and rebuilt the project using pure and open-source technologies to lower the hosting costs, and for fully custom development.

HTML, SASS and Tailwind, JavaScript, Next, Headless WordPress CMS, Figma

- **Property Management Application**

(In development)

Was contracted to help structure a React MVP, converting it from an Angular prototype. Built the front-end base, including routing, user authentication, and business components, while collaborating with a remote backend team to improve the API.

HTML, CSS with MUI, TypeScript, React

- **Xarven Finance Admin Dashboard**

(Private proxy server)

Was contracted to build a Dashboard from scratch and write a documentation for the project standard. Integrated MS Entra Auth and developed user-interface components such as data charts, customisable modules (ability to choose the data to display) and various input tools (dropdown, toggle, tooltip, etc).

HTML, Tailwind with TailGrids, TypeScript, Nuxt, MS Entra

Jix Reality

Web XR Developer

Short-term contract
April 2023 – July 2023

Sole web developer designing and building websites, both from the ground up and improving responsiveness and cross-platform compatibility of existing projects. Balanced client needs with budgets, provided maintenance documentation, and collaborated with multidisciplinary team to integrate XR into web technologies.

- **Kono Wines AR Web Application**

(Campaign has been finished successfully, if needed ask for more details)

Solely developed the front and back end of the project using a new, under-documented web AR technology, successfully delivered all required features.

HTML, CSS, JavaScript, Preact, 8thwall, Unity, Firebase, Google Analytics

- **Smart City Innovation Expo**

<https://innovationexpo.nz/> (currently is maintained by a different developer)

Joined mid-project when feature requirements grew beyond the original stack's capabilities. With limited resources, I made all features functional using third-party APIs.

JavaScript, Webflow, Make.com, Upload.io

- **He Kaakano**

<https://hekaakano.nz/>

Updated and improved existing website for responsiveness, build the mobile version from scratch, and recovered corrupted data from a stack migration.

CSS, WordPress, Elementor
